It is highly advisable to be familiar with the general methods and precautions for handling carotenoids, and with the isolation and purification strategies and methods as described and evaluated in Vol. 1A, and the principles, application and interpretation of the spectroscopic techniques as described in Vol. 1B, to ensure that the identifications and analyses on which carotenoid work is based are accurate and reliable.

Carotenoids - Handbook | George Britton | Springer
Carotenoids - An Overview Carotenoid is a huge family of pigments (colors) ranging from yellow to red in the plant kingdom, and they are predominantly found in fruits and vegetables. To date, there are more than 700 identified color pigments that can be classified into two classes - Carotenes and Xanthophylls [1,2].

Carotenoids: Handbook - Google Books
Carotenoids exhibit yellow, orange, and red colors but when they are bound to proteins, they acquire green, purple, or blue colors. They are found in a large number of natural products, such as fruits, vegetables, and sea products. This chapter presents method of extraction/isolation and analysis of carotenoids in natural products.

Methods for Extraction and Analysis of Carotenoids ...
Carotenoids, as plant pigments, have been extensively studied for almost 200 years and have helped to facilitate the development of the field of chromatography (Eugster, 1995).

Carotenoids handbook / edited by G. Britton, S. Liaen ...
Historically, the carotenoid field evolved from a specialized area of plant natural product chemistry. More recently, however, the importance of carotenoids as food colorants and as essential micronutrients has led to the influx of many new workers into the carotenoid field, and the diversification of carotenoid research into new areas, especially nutrition and medicine.
