As you slowly release the brake, the car should either remain still or slowly move forward. In either case, continue to release the brake, steadily apply more gas, and gradually release the clutch. If the car starts to roll backward, engage both the parking brake and the foot brake, depress the clutch, and try again.

The engine designers decided that the basic design ideas from the high-technology D12- and D9-engines could be used, but adapted to the increased demands on performance. In the autumn of 2003, the new D16D engine was presented together with the new FH16 trucks. It features four valves per cylinder, operated by an overhead camshaft.
