### Cannabis cultivation - Wikipedia

Cannabis is an annual, dioecious, flowering herb. The leaves are palmately compound or digitate, with serrate leaflets. The first pair of leaves usually have a single leaflet, the number gradually increasing up to a maximum of about thirteen leaflets per leaf (usually seven or nine), depending on variety and growing conditions.

Marijuana trichomes. Regarding trichomes and what they tell us, Robert C. Clarke - in his book "Marijuana Botany"- states: When resin trichomes are near their THC concentration peak, they have a translucent colour since the plant is still producing resin in the trichome glands.

### When to harvest marijuana plants according to trichome ...

In more technical terms, seed germination precedes the emergence of two cotyledon leaves at the first node. This node sprouts a set of two more leaves from a second node growing perpendicular to the cotyledons. The stem between these two lengthens, and another set of leaves grow from the following node perpendicular to the last, and so on.
