The tautochrone problem requires finding the curve down which a bead placed anywhere will fall to the bottom in the same amount of time. Expressing the total fall time in terms of the arc length of the curve and the speed v yields the Abel integral equation .Defining the unknown function by the relationship and using the conservation of energy equation yields the explicit equation:

In physics, a force is any influence that, when unopposed, will change the motion of an object.A force can cause an object with mass to change its velocity (which includes to begin moving from a state of rest), i.e., to accelerate.Force can also be described intuitively as a push or a pull. A force has both magnitude and direction, making it a vector quantity.

Fluid mechanics studies the systems with fluid such as liquid or gas under static and dynamics loads. Fluid mechanics is a branch of continuous mechanics, in which the kinematics and mechanical behavior of materials are modeled as a continuous mass rather than as discrete particles.The relation of fluid mechanics and continuous mechanics has been discussed by Bar-Meir (2008).
